Product Description

Lamination Service for PVC Decorative Sheet - Customizable Designs

Product Description:

Our **Polyvinyl Chloride (PVC)** pvc foil is primarily made from, a synthetic plastic material known for its durability, flexibility, and ease of processing. It is available in a wide range of colors, patterns, and textures that can mimic the look of natural materials such as wood, stone, fabric, or metal. Moreover, it can be applied to a variety of surfaces, including doors, cabinets, furniture, walls, and more, adhering well to different substrates and can be used in different areas in interior. In addition, it is renowned for its resilience to deterioration and strength, which is why it is frequently used in high-traffic locations. Other advantages include its minimal upkeep, once it is placed, as it just needs to be wiped down with a moist cloth once a week, and its affordability compared to natural materials. Furthermore, Realsun Deco PVC foil provides consumers with a large range of styles and finishes for various projects and design preferences. It is generally used in residential and commercial settings for applications such as kitchen and bathroom cabinets, interior doors, wall paneling, furniture surfaces, retail displays, and more.

Technical Parameters:

When it comes to the sheet's thickness, the range goes from 0.1 mm to 0.5 mm. The widths available are 1260 mm and 1400 mm, while the length of each roll varies from 100 m to 400 m.

In terms of design, they provide different wood grains, solid colors, marble, brick, and more. They also offer several surface treatments such as matt, super matt, embossed, high gloss, and soft touch. Moreover, you can get services such as OEM and ODM.

Applications:

Different Process Method for Different Applications

Membrane Press (Vacuum Press):

This type of pressing can have thickness vary from 0.20 to 0.50mm, with widths of 1260mm & 1400mm and lengths of 100 to 300m per roll. It is suitable for covering MDF, particleboard, wooden boards, fiberboard, etc. - commonly for doors, kitchen cabinets, wardrobes, furniture, etc. In addition, it is suitable for covering embossed boards and performing five surface covers at one time.

Wrapping Profiles:

This process has a thickness of 0.12-0.18mm, a width of 40mm-1260mm and a length of 300-800m per roll. It can be used to cover all kinds of profiles including wood, aluminum, PVC and more; applicable for door frames, window sills, base channels, PVC ceiling and more.

Cold Laminating:

This process has a thickness of 0.12-0.20mm, a width of 1240-1260mm and a length of 300-500m per roll. It can be used to cover all kinds of flat panels - such as wood, steel, aluminum, PVC - and suitable for doors and furniture.

Hot Laminating:

The thickness of this process range from 0.16 to 0.30mm, widths of 1260mm and lengths of 200 to 300m per roll. It is mainly used to cover PVC panels, steel panels and aluminum panels; more suitable for doors and skirting.

Self-adhesive:

With thicknesses of 0.10 to 0.20mm and widths of 600mm & 1220mm, with a length of 5 to 50m per roll. This type is mainly used on any smooth surface for furniture and indoor decorations.
