Product Description:

Our **PVC Foil** is primarily made from **Polyvinyl Chloride (PVC)**, a synthetic plastic material known for its durability, flexibility, and ease of processing.

A wide range of colors, patterns, and textures of our PVC foil make it possible to create different aesthetic effects. Its appearance can mimic the look of natural materials such as wood, stone, fabric, or metal, providing a cost-effective alternative to these materials while retaining a high-quality aesthetic.

The foil can be applied to a variety of surfaces, including doors, cabinets, furniture, walls, and more. Thanks to its adhesion to different substrates and its durability, it is frequently used in different area in interior.

RealSun Deco PVC foil is renowned for its resilience to deterioration and strength, making it perfect for applications in high-traffic locations. Low maintenance is another advantage as it usually only requires wiping down with a moist cloth once a week.

The affordability of PVC decorative foil in comparison to natural materials is one of its main benefits. A large range of styles and finishes available from manufacturers make it possible to modify the foil to projects specifications or individual design preferences.

Decorative PVC foil can be commonly found in residential and commercial settings, used for kitchen and bathroom cabinets, interior doors, wall paneling, furniture surfaces, retail displays, and more.

Technical Parameters:

If you are looking for a PVC film that is both durable and reliable, then our product is your best choice. We specialize in PVC films with thickness ranging from 0.1 mm to 0.5 mm. Furthermore, we offer PVC films with widths of 1260 mm and 1400 mm and can roll to a length of up to 400 metres.

What makes our product special is its design and surface treatments. Our product features a wide range of beautiful and stylish designs, from wood grain, solid color, marble, and brick to many more. Plus, our product also features a choice of surface treatments, including matt, super matt, embossed, high gloss, and soft touch.

Finally, we also provide OEM and ODM services to cater to your needs better.

Applications:

Different Processes for Different Applications

Membrane Press (vacuum press): This process is suitable for boards with a thickness of 0.2 - 0.5mm and widths of 1260mm to 1400mm. These boards can be applied to material such as MDF, particleboard, wooden board, fiberboard, etc., for use in doors, kitchen cabinets, wardrobes and furniture. This process allows for embossed boards to be covered, as well as five surfaces at the same time.

Wrapping Profiles: Profiles with a thickness of 0.12 - 0.18mm and widths of 40 - 1260mm is suitable for this process. Profiles such as wood, aluminum, and PVC can be applied to door frames, window sills, base channels, PVC ceilings, and more.

Cold Laminating: Using material with a thickness of 0.12 - 0.20mm and a width of 1240-1260mm, this process is suitable for flat panels such as wood, steel, aluminum, and PVC for use in doors and furniture.

Hot Laminating: Use material of 0.16 - 0.30mm and widths of 1260mm for the hot laminating process. PVC panels, steel panels, and aluminum panels can be used for doors and skirting.

Self-Adhesive: Material with thickness of 0.10 - 0.20mm and widths of 600mm/1220mm is suitable for this process. It can be applied to any smooth surface for furniture and indoor decorations.
